DETAILED ACTION

Election/Restrictions

1. Applicant's election of Invention I, Species K in the reply filed on October 28, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 2-7, 10 and 11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 28, 2004.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Arai.

Re claim 1, Arai discloses a sensor for sensing a dynamic state of a movable member in a magnetically actuated motion control device, the magnetically actuated motion control device including a housing defining a cavity in which the movable member is located, the sensor comprising: a first member (13) secured to the housing

(4) of the magnetically actuated motion control device; and a second member (17) coupled to the movable member (1), wherein relative position between the first member and the second member indicates the position of the movable member relative to the housing.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Beck, Rosenberg et al., and Hamilton et al. teach sensors for sensing a dynamic state of a moveable imember.
